

Portland Harbor Stormwater Strategy Meeting
Thursday, April 20
10-Noon
City of Portland

AGENDA

Issue: To date, no decisions have been made about the methodology that will be used to evaluate stormwater loading and recontamination potential relative to the remedial objectives. This is problematic in a number of ways:

- It's hard to know whether we are doing enough, or too much, when conducting stormwater evaluations on cleanup sites and city outfalls
- Source control decisions are being made, but we don't have a good way of knowing whether they are likely to be adequate or not
- We may be missing opportunities to collect pertinent data, or collecting the wrong data, when conducting site assessments and doing sampling for the outfall project
- Stormwater evaluation efforts have, by and large, been confined to the PH study area. It would be helpful to know, sooner rather than later, whether the scope should be expanded to include site evaluation/site discovery efforts upstream of the study area, and what expectations this creates for the City and DEQ.

Expected Outcome: The goal of Thursday's meeting is to get the ball rolling on this topic by answering the following questions:

1. In addition to the bullets above, are there other problems/concerns related to this issue?
2. What approaches or methodologies might we consider?
3. How will we make a decision about which approach to take?
4. Who is responsible for doing this work?
5. What are the next steps?
